

Splitter Saws & Radius Eased Edge Cutters

Splitter Saw & Radius Eased Edge Cutters For Moulders

"Splitter Heads" Rip, Groove, and Surfacing in One Pass

Don't have enough spindles? We offer custom made heads that can combine a moulder head and a carbide tipped saw to allow you to rip stock and surface on the same spindle, or allow you to ease edges and rip for square production. Also commonly used to cut a weather strip groove without the hassle of breaking moulder knife splitters - 0-deg. radial carbide tip saws cut smooth grooves and last thousands of feet longer. Call for prices and details for your specific application. We can provide good solutions for nearly any product run.
